in a New California Sun Certified
Energy Efficient Solar Home

BUILDER LOGO HERE

Put the **Power of the Sun** to Work for You

Solar homes use photovoltaic (PV) panels to **effortlessly generate clean, renewable energy** from the sun to power your home. Rooftop solar PV systems are low-profile and installed as part of the roof system. Coupled with additional energy efficient building methods, these new homes help to **lower your utility costs** while protecting our environment.

The New Solar Homes Partnership is working with [INSERT BUILDER NAME HERE] to bring new, energy efficient solar homes to the market. "California Sun Certified" homes offer high quality, energy efficient features and solar panels that generate electricity from the sun. Look for the California Sun Certified seal when visiting a new home community to ensure savings on your electric utility bills.

Why Go Solar?

Save Money. Combining energy efficiency with solar technology may reduce a home's utility bill by **up to 60 percent**.

Solar Technology is Now. *Tens of thousands* of California homeowners are already enjoying the benefits of solar.

Save the Environment. Solar power **reduces global warming** by significantly cutting air pollution and greenhouse gas emissions.

Solar is Effortless. Solar roof panels are **virtually maintenance-free**. There is a ten-year system warranty to protect against defective workmanship, system or component breakdown, or degradation in electrical output of more than 15 percent.

Earn Tax Credits. Solar homes qualify for a **federal tax credit of up to 30 percent** of the solar installation. *Consult your tax professional or the IRS for details.*
